Bacteria Free. 

PolySilk 60 design.

EnviroGreen™. 

Wide variety of decorative frames for inside and outside mounts.

Low maintenance and easy to clean.

Designed with Child Safety Features. 

Lifetime Limited Warranty.

Benefits

An advanced revolutionary feature designed to obtain the best optimum louver closure on a shutter panel in both directions (up and down positions).

Leather and Wood look for all environments.

Enduralink™ connectors provide outstanding strength allowing the louvers to close tightly in both directions and eliminating callbacks due to breakage.

With computerized positioning of the louvers, varying height shutters in the same room will have the same uniform appearance which is very aesthetically appealing to the eye. Same size rails also can be used on all shutters, with the divider rail placed within 3/4" of the desired position.

The San Marco™ Collection is available in 3 1/2" and 4 1/2" louver sizes to optimize the view out of your window.

Helps reduce heating and air conditioning costs and reduces outside noise.

The San Marco™ Collection Shutters will coordinate with any type of furniture or décor.

The Concealed System in the louvers, stiles, and the tilt bar are inset and invisible. This provides a sleek, elegant, aesthetically pleasing look.

The Surca™ Locking System is standard on The San Marco™ Collection. This adjustable locking mechanism eliminates the need for magnets and saves time on installation. The self-leveling feature ensures that the panels remain level while closed. The rust proof spring enables the Surca™ Locking System to be used in high humidity and salty environments.

Resists the damaging effects of moisture making it a perfect choice for kitchens, bathrooms, jacuzzi, pools and any wet, humid or salty environments.

The exclusive Unisplit™ feature on the tilt bar allows for greater privacy and permits full or partial light control on the shutter.

Our exclusively formulated compound does not promote the growth of fungus or bacteria.

The San Marco™ Collection utilize extremely strong hinge connectors and the ultra strong PolySilk 60 design. Aluminum reinforcement as required.

Environmentally friendly shutters that meet regulations regarding formaldehyde and VOC emissions.

Admirable and fashionable frames provide an exquisite appearance for all rooms. These frames solve "out-of-square openings".

The San Marco™ Collection can be cleaned with ordinary soap and water.

The San Marco™ Collection contains no cords which could be harmful to a child. Standard three (3) leaf hinge recommended for child and pet safety.

We believe our product will be a permanent part of your collection for years to come. A simple promise that is backed by our 25 years of team innovative experience in the marketplace.
